

**INGREDIENTS per 100 ml**

Sodium	10 g
Sodium bicarbonate	55 mg
Sodium citrate	
Magnesium sulphate	
Glucose	

DURABILITY

24 month. See best before date

STORAGE

Store in a cool dry place.

Electrolyte

Resets the salt balance in sweating

Replaces electrolyte imbalance when the horse sweats. A horse can lose 10-15 liters of fluid per hour during training. Giving only water as a replacement, it can take up to four days for the horse to recover salt balance. Addition of electrolytes contributes to faster recovery and better performance.

VIMITAL electrolyte is based on replacing the salt balance primarily through the sodium chloride but also other compounds of sodium, which is the substance which the horse needs for fluid loss. Sodium deficiency can also block the natural thirst reflex, which makes it harder to give the horse compensation.

In order to increase palatability is VIMITAL Electrolyte formulated in glucose.

Electrolyte can lead to dehydration, among others with low efficiency, poor oxygen transport and muscle cramps.

Usage

Given after exercise where the horse sweated. You can not give electrolyte as a preventive measure because the body can not assimilate them when there is need.

It is best to give VIMITAL Electrolyte blended with water, but if the horse does not drink fast enough, so it is perfectly fine to mix the feed.
