

**INGREDIENTS per 10 ml:**

Water

Glycerine (E 422)

Sodium hyaluronate

Sodium benzoate (E-211)

Aroma

50 mg

STORAGE

Keep cool and out of the reach of children.

DURABILITY

24 months. See best before date.

Supplements can not replace a varied diet

Hyaluron

Increases the viscosity of synovial fluid

Trikem Hyaluronic acid is a dietary supplement with the same substance that the body produces for synovial fluid, lubricating and cushioning. Daily supplements of hyaluronic acid stabilises the synovial fluid function.

Synovial fluid in the joints wears out with use. At a greater age, when the production of endogenous substances reduces, or at high frequency training / strenuous efforts, the level the body produces is not always sufficient to replace the hyaluronic acid in order to maintain the synovial fluid properties.

Hyaluronic acid is also the carrier of nutrients to the parts of the limbs that contains no blood vessels, such as bone and cartilage. Poor synovial fluid levels puts more wear on the joint and also impairs the healing process.

Trikem Hyaluronic acid is absorbed in the intestine and reaches the joints via the bloodstream. Daily administration contributes to the stable presence of hyaluronic acid in synovial fluid for all the body's joints.

Usage

Ready solution.

Can also be mixed in water, other drinks or food.

Not to be heated.
